TRAINING OPERATIONS & MAINTENANCE SUPPORT FOR DEFENSE CUSTOMERS

Advanced IT is committed to enhancing mission readiness by providing top-tier technical expertise in training and simulation maintenance, as part of our Training Operations & Maintenance (O&M) Support portfolio. Our capabilities include simulation and electronics support, information systems management, training development, and production control, all designed to keep critical training systems effective at key installations across the United States.

Our capabilities include simulation and electronics maintenance, TADSS sustainment, information systems management for training environments, and training product support.

Our team's experience extends to sustaining a wide range of advanced training devices, from vehicle simulators to homestation instrumentation systems. **We have experience supporting simulator and trainer maintenance at multiple U.S. installations.** By maintaining and supporting these essential tools, we help ensure that service members are equipped with reliable systems to sharpen their skills and prepare for the challenges they face.

Focused on sustaining TADSS, simulators, and training systems to keep warfighters ready.
